Assignment 8: *Reference Object*

We were to design and render a small object that could serve as a common reference point when testing new types of material. This object is a scaled-down copy of my previous cube model from assignment 1. The new materials used to print this reference object are glow in the dark PLA, thermochromic PLA, soft PLA, Laywoo-D3 (a “wood filament”), and Laybrick (a “stone filament”). I followed the provided extruder and bed temperatures that were recommended for each filament type, so I didn’t have much problem printing with them.
